

Waterlase®

SIDE-FIRING TIP

AVAILABLE
NOW

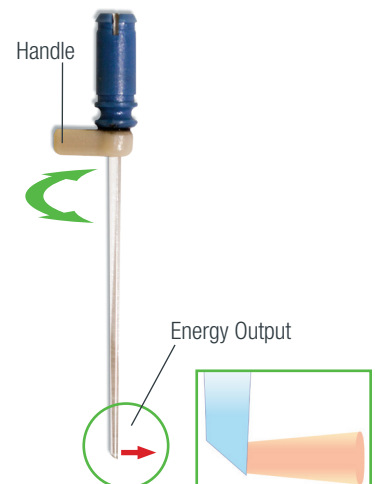

TRANSFORMING THE MANAGEMENT OF PERI-IMPLANTITIS

Ideal for safely and effectively debriding implant threads.

The Waterlase Side Firing Tip™ (SFT) is superior to traditional implant debridement methods, featuring a unique design that precisely tapers to the tip.

Feature	SFT	Traditional
Access to subgingival infected titanium surface and in-between threads, without opening a flap	✓	✗
Effective at removing >98% of biofilm on infected titanium surface*	✓	✗
Does not damage titanium surface or significantly affect surface temperature	✓	✗
